The U.S. forklift division situated in Cleveland has a skilled team experienced in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's initial domestic lift truck market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. begun to import assembled forklifts as part of a nationwide machinery expansion project. Early sales of this industrialized equipment focused on large business groups, the armed services and on state-run companies. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical instruction became the new focus for enhancing quality and product development.

Home-based lift truck business for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's progressive technological advancements combined with sales success placed them in a position of considerable expansion of their forklift business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to help them in the highly competitive North American materials handling industry. This joint-venture proved highly successful for Daewoo and their lift truck product sales expanded greatly. In 1984, the company completed construction of a new facility to help in producing high end value-added goods for export. In 1993, the company had a international sales system and started exporting models they had established through in-house expertise, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth opportunities into overseas markets.
